

All-in-one laminator with cleaning roller

# DH-6180

## DATA

**This machine is a device that laminates protective film for photomasks.**

**It is an all-in-one machine with cleaning unit, eliminating the need for dust removal with a hand roller, and all you need to do is feed a photomask into the device and it will automatically handle all the work that starts with dust removal and ends with lamination.**

**The strokes of the vertical motion of the lamination rollers have been set to be large, making it easy to set film. It utilizes high-precision, conductive lamination rollers to allow for stabilized lamination with minimal center run-out.**

**The pressure lamination rollers can change pressures on the sides to conduct lamination with uniform pressure. It is standard equipped with an off-contact switch, making it easy to conduct prearrangement and eliminating the inefficient use of film due to the removal of air bubbles and wrinkles.**

### <Simple Overview>

- |                         |  |
|-------------------------|--|
| • Machine dimensions:   | Approx. (W) 550+238 x (D) 1080 x (H) 1140 mm |
| • Processing speed:     | 0.5 - 5 m/min                                |
| • Workpiece size width: | Max. 610 mm                                  |
| • Supply voltage:       | Supports various types                       |
| • Weight:               | Approx. 210 kg                               |
