

All-in-one laminator with cleaning roller

DH-6680

DATA

This machine is a glass mask laminator that can affix protective film on exposure photomasks.

It consists of a feeding stage, cleaning unit, glass laminator, and receiving stage.

It is an all-in-one machine with cleaning unit, eliminating the need for dust removal with a hand roller, and all you need to do is feed a photomask into the device and it will automatically handle all the work that starts with dust removal and ends with lamination.

The pressure lamination rollers can change pressures on the sides to conduct lamination with uniform pressure.

<Simple Overview>

- Machine dimensions: Approx. (W) 1940 x (D) 1100 x (H) 1330 mm
- Processing speed: 0.5 - 3 m/min
- Workpiece size: (W) 300 - 600 mm (Thickness) Max 6 mm
- Supply voltage: Supports various types
- Weight: Approx. 350 kg
