

Laminator for flexible substrates

DH-7110

DATA

This machine is a laminator for flexible printed circuit boards. (Sheet to Roll)
It consists of a shifting device, a cleaning unit, a lamination unit, and winding device with EPC control.
It is an all-in-one device with a cleaning unit, eliminating the need for dust removal,
and all you need to do is feed a board into the device and it will automatically handle all the work from dust
removal to lamination.
Because it has a winding device with EPC control, it can perform high-precision winding operations.

<Simple Overview>

- Machine dimensions: Approx. (W) 2260 x (D) 1700 (when the cleaning unit is moving: Max. 2100) x (H) 1900±30 mm
- Processing speed: 0.3 - 3 m/min
- Workpiece size: (W) 250 - 500 mm (L) 300 - 430 mm (Thickness) 0.03 - 0.1 mm
- Supply voltage: Supports various types
