

Clean-roller basis cleaning machine

MC-1200

DATA

This machine is a dust-removal device with a magnetic drive that has been developed for inline use. It uses cleaning rollers and cleaning tape to remove dust. The cleaning rollers and cleaning tape can be pulled out, allowing you to easily clean the rollers, cut the tape, and perform replacement work. It has a contactless drive unit that eliminates dust generation and it has been equipped with a speed-difference absorbing mechanism, which prevents damage even when there are speed differences.

<Simple Overview>

- Machine dimensions: Approx. (W) 240 x (D) 1106 x (H) PL + 363 mm
- Processing speed: 1.0 - 18.0 m/min
- Workpiece size width: Max. 620 mm
- Supply voltage: Supports various types
- Weight: Approx. 120 kg
- Roller and tape configuration: 4 rollers and 2 rolls of tape, in a 2:1 configuration. Refer to the diagram on the right for details.
