

Roll-brush type cleaning machine

# RB-2000S

## DATA

**This machine is a roll-brush type cleaning machine that has been developed for the purpose of inline dust removal.**

**It uses a combination of curtain brushes and roll brushes to collect various foreign matter into a dust collector. It utilizes ultra-fine nylon fibers that brush away dirt and dust from the surface of printed circuit board without causing damage.**

**This machine contains a built-in static removal device to prevent the adherence of fine dust that is caused by static electricity.**

### <Simple Overview>

- |                         |   |
|-------------------------|---|
| • Machine dimensions:   | Approx. (W) 240 x (D) 1070 x (H) PL+300±30 mm |
| • Processing speed:     | 1.0 - 15.0 m/min                              |
| • Workpiece size width: | Max. 630 mm                                   |
| • Supply voltage:       | Supports various types                        |
| • Weight:               | Approx. 150 kg                                |
